¹ **Earnings Credit:** The earnings credit on the Commercial Checking account is based on the average 91-day Treasury Bill rate for the current month. It is calculated based on the average "collected" balance, less a 10.00% reserve requirement. ["Uncollected" balances will be charged the 91-day Treasury Bill rate, plus 3.00%. This situation applies only when the average account balance is very low.] **Earnings Credit Calculation Example:** For the purposes of this example, the assumption is that the T-Bill Rate is 0.80%, the average balance maintained on the Commercial Checking account for the month was \$200,000, and there were 31 days in the monthly cycle. Multiply the \$200,000 (average account balance) x 90% (to exclude the 10.00% reserve). Take that amount and multiply it by .008 (T-Bill rate). That provides you with an annual amount of earnings of \$1,440.00. To determine the monthly earned credit, divide the annual amount by 365 days in a year and multiply it times the number of days in that particular month (31 days). Your monthly earned credit would be \$122.30. [$\$200,000 \times 90\% \times .008 \times 31 = \122.30]
